Product Release

GFCI

Ground Fault Circuit Interrupter

DESCRIPTION

GFCI Power Cord

The GFCI power cord protects against ground faults preventing electric shock. A ground fault is an unintentional path between a source of current and a grounded surface.

When a ground fault is detected the circuit stops the flow of current. The GFCI can be reset by pushing the reset button. A test button tests the circuit interruption before and during use.

It is required by NEC Section 422.51 and UL 751 for **vending machines** manufactured or refurbished after April 2007. GFCI's are also required for **pressure washers, portable outdoor signs** and self contained **spa's or hot tubs**.

APPLICATIONS

- Consumer Products
- Vending Machines
- Electric Vehicles
- Portable Heaters
- Industrial
- Submersible Pumps

KEY FEATURES

- **Designed to ANSI/UL498 & ANSI/UL1699**
- **Protects against electric shock**
- **Push button resettable plug**
- **Available in Black**
- **Custom cord lengths available**

15A 120V

LISTED

RoHS 2002/95/EC COMPLIANT
