**AUTOSPlice EXPANDS & MODERNIZES
PRECISION METAL STAMPING CAPABILITIES
WITH MOVE TO A NEW FACILITY IN PARAMOUNT, CA.**

San Diego, CA. June 1, 2010, Autosplice has announced a major modernization and expansion of its North American precision metal stamping operations with a move to a new manufacturing facility. This new building will also allow Autosplice to increase production capability while improving upon the world-class capabilities of their highly skilled personnel.

Together with other manufacturing facilities around the world, Autosplice continues to grow the company's global footprint with this move to Paramount, CA by enhancing our ability to provide customers more services for new and existing product lines. Autosplice is looking forward to leveraging the synergies that this new facility provides in order to solve our customers' most challenging electrical interconnect problems.

The new facility in Paramount continues Autosplice's presence within the greater Los Angeles area while expanding to over 30,000 square feet and utilizing world-class production equipment. The capabilities of the facility showcase Autosplice's ability to design and produce intricate stampings in the medium to high volume range.

"We are excited about the additional resources and strengths we can now offer," said Tom Burns, Vice President of Operations. "The on-going commitment that Autosplice has to grow its electronic solutions business and solve real-world customer challenges has always been seen as positive among our global customer base. We look forward to the growing role of our Paramount facility within the Autosplice family."

Autosplice is a multi-national full-service supplier that delivers electrical interconnect solutions and equipment worldwide. Autosplice operates in many countries around the globe including USA, Mexico, Brazil, UK, Germany, Japan, Korea, Singapore, and China.
