March 22, 2011

To Our Valued Customers:

Belden has received numerous inquiries as to whether the devastating earthquake and tsunami in Japan have affected our supply of raw materials. Currently, Fluoropolymer supply is the most vulnerable. Two of Belden's most important Fluoropolymers are FEP and PTFE which are compounds used in the manufacture of certain cable products.

To date we have not experienced a shortage of supply and should that change, we will communicate more specifically with those affected customers. In the mean time please refer to the following web sites for the most current information:

March 16, 2011

Dear Customer:

Thank you for all of your wishes and prayers concerning the people of Japan and for our parent company, Daikin Industries, during this time of extreme difficulty and emergency.

We are trying our best to communicate our situation and the impact on our business and I would like to continue that communication in this letter to you.

First and foremost, we are thankful that all Daikin employees are accounted for and that no one was injured by this catastrophic event.

Our plant in Kashima, outside of Tokyo, did not sustain any damage to function during the earthquake and Tsunami. However, due to the lack of power, water and gas supply, our Plant is currently shut down and will remain so for the immediate future. We have no specific information as to when the plant will restart, and the current situation is severe. We will continue to monitor the situation and update you with more specific information as we obtain it.

Our plant in Yodogawa, outside of Osaka, did not see any physical impact as a result of the Earthquake. However, the lack of raw materials supplied from our Kashima Plant, in conjunction with nation-wide logistical complications, will lead to the reduction or stoppage of the overall output of our Yodogawa Plant.

The following products are affected as a result of this situation:

- PTFE
- PFA
- EFEP
- Unidyne (oil and water repellent)
- FEP
- ETFE
- Fluoroelastomers
- Telomer Related Products

Daikin America will continue shipments to you through the end of March. Beginning in April, Daikin will reevaluate its supply to you after analyzing its global inventories of products and raw materials; and progress made in the logistical situation in Japan.

Daikin is a global company that sources the supply of our products from a global base. The supply of all products to Daikin customers in all regions will be impacted by this tragedy and by our current suspension of shipments in and out of Japan. We are working diligently to determine the impact of this on your supply. We are sincerely sorry for the impact of the tragic situation in Japan. We will continue to dedicate ourselves to providing the best information in a timely fashion, with honesty and respect for the value of our customers.

Sincerely,

A handwritten signature in blue ink, appearing to read "Rich Straff".

DuPont Fluoropolymer Solutions

March 17, 2011

Dear Fluoropolymer Solutions Customer:

You are all aware of the devastating earthquake and tsunamis that struck Japan last Friday. The human suffering has been very great, and serious complications as a result of the disaster continue to unfold. Our thoughts and prayers are with the people of Japan, including our colleagues, partners, friends and their families in Japan. We were gratified to learn that all DuPont employees and their immediate families are safe. Even with some of the best emergency response systems in the world and its great economic strength, Japan faces a crisis that is monumental and, in some respects, unprecedented.

DuPont Fluoropolymer Solutions relies on a global network of plants and warehouses to supply our products to you. Our plant facilities and related warehouses in Japan are located south of Tokyo and received only minor damage. These facilities are currently operating. As you would expect, infrastructure systems have been disrupted in many areas in Japan, including electric power, communications and transportation. Some key raw materials suppliers to our facilities in Japan are impacted. We are working to offset these issues and will work directly with you on those impacted products.

Our facilities elsewhere in the world continue to operate. We do not expect any serious implications for these facilities due to the situation in Japan. The vast majority of our global facilities had been operating at capacity prior to the events in Japan. Our ability to fulfill any additional demand, above that already confirmed, will be difficult. Your account representative will work directly with you to confirm your current orders and understand your longer term demand needs.

We thank you for your business and appreciate your patience as we work through our supply positions.

A handwritten signature in black ink that reads "Douglas Hayes".
