Tubing Application News

Novel Application for Heat Shrink Tubing

Clear PVC heat shrinkable tubing has been increasingly applied in the safety harness, lanyard and fall restraint industries. OSHA §1926.502 (Fall protection systems criteria and practices) imposes a requirement that all lifelines and lanyards shall be protected against being cut or abraded. Our robust, clear PVC heat shrink helps protect labels and stitching from abrasive surfaces and edges. Heat shrinkable tubing is easily installed over lanyards and other assemblies, shrinks quickly and is easily integrated into assembly operations.

Many of the other benefits of using our product in this application are listed below:

- Crystal clear - allows unobstructed view of labels and warnings
- UV and weather resistant - will provide years of protection
- Tough - resists abrasion and impact
- Grips tightly - easily shrinks down on oddly shaped substrates
- Easy installation - shrinks at a low temp so there is little risk to rope or webbing and is easily integrated into assembly operations
