E-MOBILITY

Electromobility, or e-mobility as it's more commonly known, is a broad term to include all types of transportation vehicles that are powered by an electric motor. They store energy in an on-board battery, which is recharged externally. These vehicle types include cars, buses, trucks, motorcycles, bicycles, off-road vehicles, water-based vessels, trains, and the like.

From an interconnect perspective, the common thread in all these vehicle types is the need to transmit power from a charging source to the battery and from the battery to the vehicle's on-board systems. Efficient power connectors from Positronic are an ideal choice for these application types.

APPLICATIONS

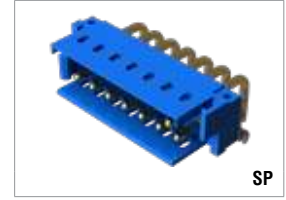

- EV charging stations
- Battery charging bays
- Battery interface
- Inside-the-box power distribution
- Power and signal I/O
- Rack mount power supplies

FEATURES & BENEFITS

- Best-in-class power efficiency ensures minimal power loss and heat build-up
- Machined contacts provide stable, durable performance during long life cycles
- Excellent performance-to-price ratio minimizes total cost of ownership
- Excellent linear current density allows for more capability in smaller packaging
